

SMC planetary nenubae in S-PLUS

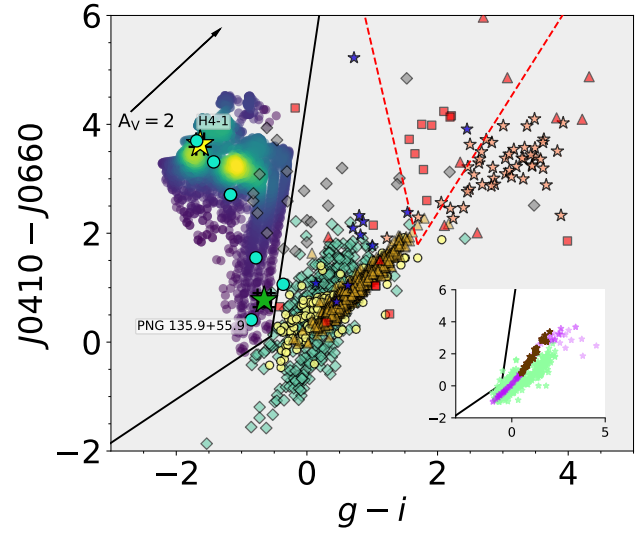

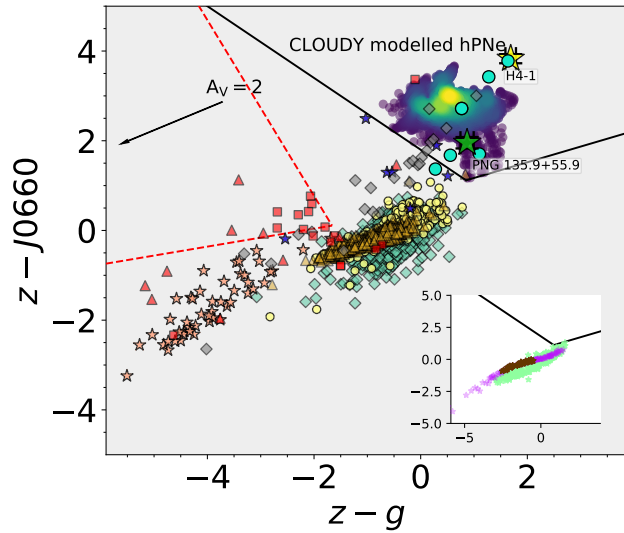

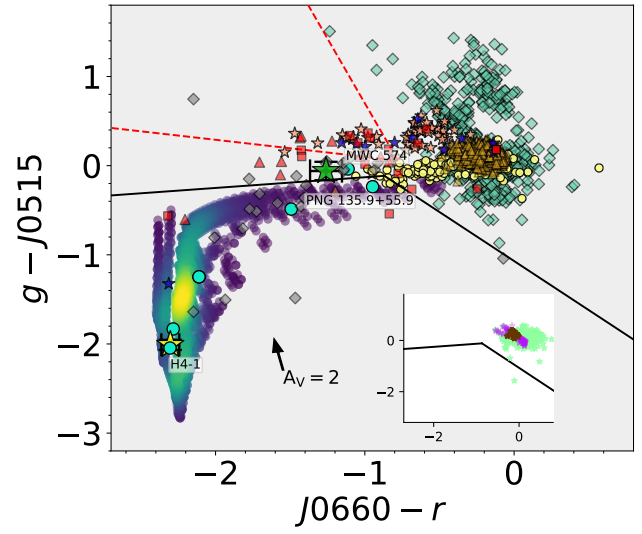

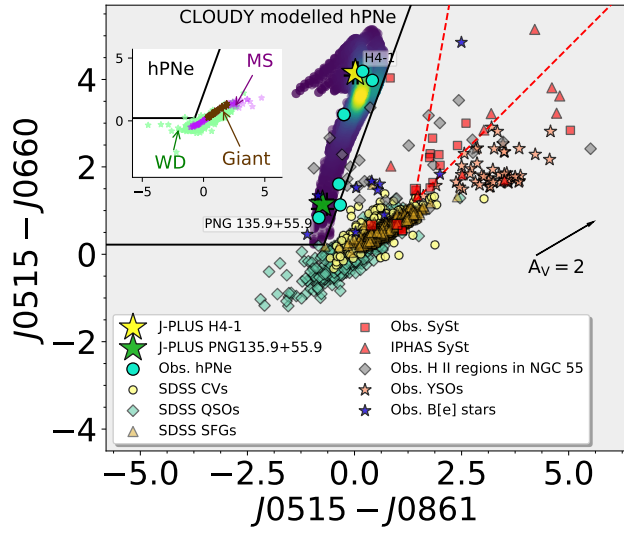

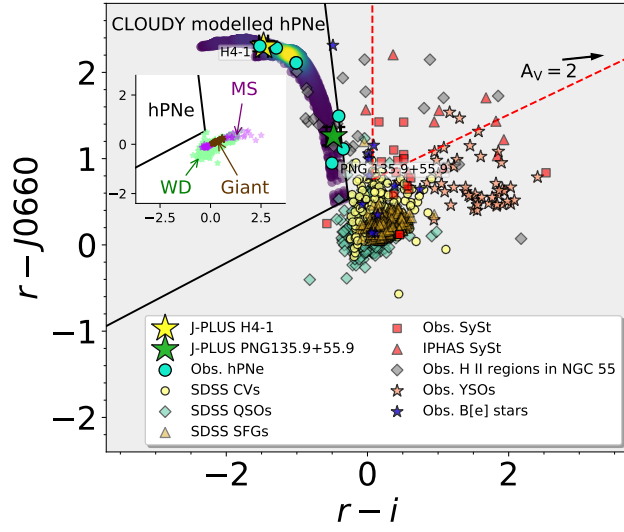

1 Science verification

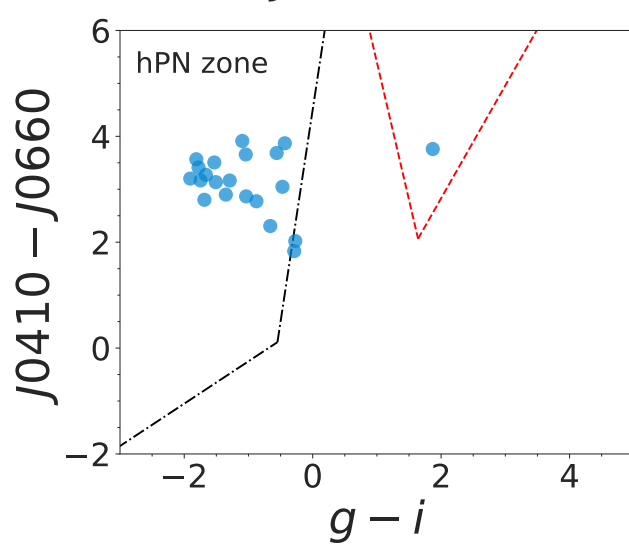

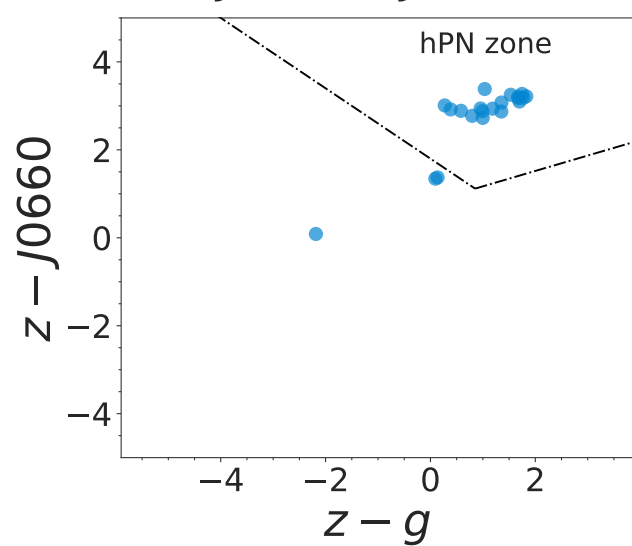

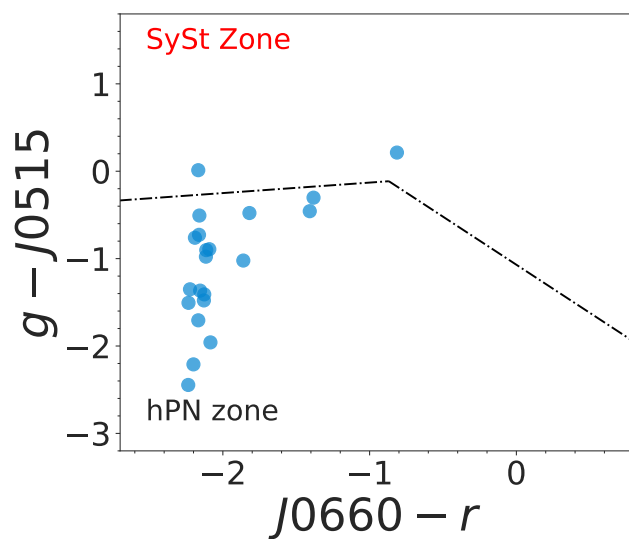

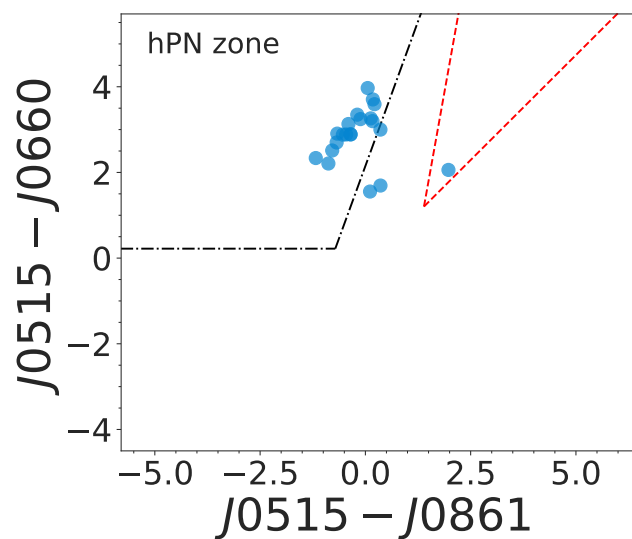

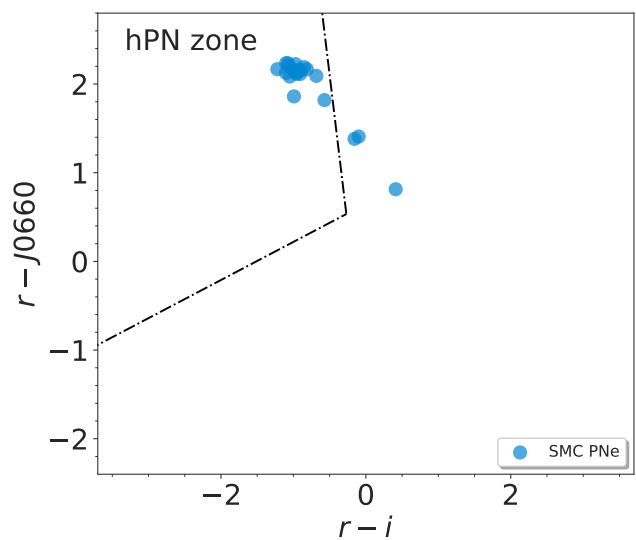

I found this sample of SMC PNe: vizier-*j* J/A+A/472/101/table7. Chemical evolution of SMC planetary nebulae (Idiart+, 2007, 2007A&A...472..101I) This catalog has ~ 40 PNe.

I made cross matching between this catalog and SPLUS catalog. I found 21 matches using a 1 arcsec of radii.

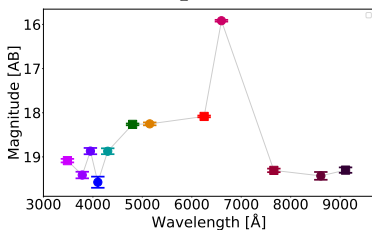

I put the final matches in my diagram,
